CANADA - METEOROLOGICAL BRANCH - DEPARTMENT OF TRANSPORT

MONTHLY WEATHER MAP

January 1959

MAR 20 1959

General Summary of Weather Conditions

Temperatures across Canada in January were distinguished by two great temperature anomalies. A vast area of above normal temperatures covered all of Quebec except the extreme south and stretched eastward through Labrador, southward through Newfoundland and New Brunswick, and northward to cover Keewatin and Franklin. The centre of this anomaly was around Ungava Bay where temperatures of sixteen degrees above normal were reported. An area of below normal temperatures stretched through Ontario and the Prairie Provinces northwestward to the Yukon, where temperatures were as much as twenty-five degrees below those normal in January. Precipitation was less than the usual amount in parts of the Maritimes, a small area of central Ontario, most of northern Ontario, Manitoba, Saskatchewan, northwestern British Columbia and the Yukon. On the other hand falls were greater than usual throughout Quebec except for a small area northeast of Quebec City, and in most of southern Ontario, southern Alberta and British Columbia, and almost everywhere in the Northwest Territories.

January was generally a sunny month in most parts of Southern Canada, particularly in the Atlantic Provinces.

Mean temperatures in January on the island of Newfoundland averaged a little above the seasonal, but northward differences from normal were much greater, reaching nine degrees near the Strait of Belle Isle and averaging about ten degrees above the usual January values throughout Labrador. Precipitation was a little below normal in the extreme southeast of Newfoundland with St. John's reporting thirty-eight per cent below the usual value. Over almost all of the Island and over all of Labrador, however, precipitation was above normal with excesses varying from twenty-five to fifty per cent. Gander reported 52.2 inches of snow, 31 inches more than the usual January amount, only one inch less than the record fall of 1940. The precipitation excesses in Newfoundland were almost all in the form of snow, since rainfall amounts were less than normal at most stations.

Temperatures in Nova Scotia and Prince Edward Island averaged about the usual January values, with scattered small excesses and deficiencies. In New Brunswick there were a few small deficiencies near Saint John, but northward temperatures were three or four degrees above the usual January values.

Precipitation in the Atlantic Provinces ran thirty to forty per cent above normal to the east and west of the Bay of Fundy, but elsewhere deficiencies were general, averaging forty to fifty per cent across northern Nova Scotia, Prince Edward Island and all of New Brunswick except for the southwest corner.

Temperatures in the extreme south of Quebec averaged rather below the usual January figures; deficiencies were about a degree in the Eastern Townships and about three degrees in a small area north of the Ottawa River. Elsewhere throughout the Province temperatures were above normal. Excesses averaged three to five degrees in Gaspe, four to six degrees near the Saguenay, and nine or ten degrees in the region northward to Nitchequon. The greatest anomaly was sixteen degrees at Fort Chimo, near Ungava Bay.

Almost everywhere in Quebec, precipitation was well above the usual January values. Excesses ranged from thirty to a hundred per cent in the north. There was a small area of precipitation deficiency of about thirty per cent along the north shore of the St. Lawrence from Quebec City to Seven Islands.

Temperatures were below normal everywhere in Ontario in January. In southern Ontario, deficiencies increased westward from one or two degrees near Ottawa to four degrees at Toronto and six degrees at Windsor. In northern Ontario deficiencies were even greater, increasing westward from two degrees at Kapuskasing to eight or nine degrees westward from Lakehead.

Precipitation in Ontario had well defined areas of surplus and deficiency. It was below normal in an area of southern Ontario near the shores of Georgian Bay; deficiencies ranged from twenty to thirty per cent. Precipitation was also below normal between Lake Superior and James Bay and westward to the Manitoba border, with deficiencies generally averaging from forty to sixty per cent. In the remainder of the province surpluses were general. Excesses were generally near thirty per cent to the north of St. Lawrence River and along the north shore of Lake Ontario. In the triangle of Lakes Huron, Erie and Ontario, surpluses averaged between fifty and one hundred per cent. There were small excesses in the southeastern part of northern Ontario with Timmins reporting fifty-nine per cent above the usual fall.

Temperatures were below normal everywhere in the Prairie Provinces in January. Deficiencies were generally four or five degrees near Lake Winnipeg, and south of the South Saskatchewan River, but increased northwestward to eleven degrees at Saskatoon, twelve degrees at Edmonton and sixteen degrees northwest of the Peace River.

Precipitation was very light in the southern half of Manitoba and the southern half of Saskatchewan, with deficiencies ranging generally from sixty to one hundred per cent. Winnipeg reported only 2.2 inches of snow, the smallest fall since 1919, and Regina had still less. The northern half of Manitoba and Saskatchewan had surpluses varying from twenty per cent at Brochet to one hundred and twenty-five per cent at Churchill. In Alberta, precipitation was generally above normal with surpluses of forty to ninety per cent. Small areas along the Bow River near Calgary and northwest of Edmonton had precipitation a little below the usual January amounts.

Temperatures in British Columbia in January were above normal in the southeast and southwest. Excesses along the Thompson River, the Columbia River and Lake Okanagan and along the Lower Fraser ranged from two to four degrees. On Vancouver Island temperatures were about normal in the interior and two degrees above normal along the coasts. Everywhere else, temperatures in British Columbia were below normal. Deficiencies were from two to four degrees in the area between the middle Fraser River and Queen Charlotte Sound. Northward, deficiencies increased and near the British Columbia-Yukon boundary temperatures were from nine to twelve degrees below the usual January values.

Precipitation in British Columbia in January was almost everywhere above normal. Along the North Coast and the boundary between British Columbia and the Alaska Panhandle, there were deficiencies of from twenty to fifty per cent, but elsewhere surpluses were the rule. In the southeastern corner between Arrow Lakes and the Kootenay River, surpluses varied from eighty to one hundred and forty per cent. There were large surpluses also, reaching one hundred and fifty per cent around Lake Okanagan. The north Thompson and Fraser River Valleys were also areas of precipitation excess. Excesses reached one hundred and forty per cent at Lillooet, but in the Lower Fraser Valley and along the south coast surpluses were rather smaller, being of the order of forty to seventy per cent. Northward in the Province, excesses varied from thirty to sixty per cent, although Fort St. James, Fort St. John and Fort Nelson all reported excesses of more than one hundred per cent.

Temperatures in the Yukon in January were far below the usual values. The greatest anomaly was at Mayo Landing which reported a mean temperature twenty-five degrees below the usual January figure.

Precipitation in the Yukon was generally below the usual January amount. Whitehorse reported an excess of about ten per cent, but at more notherly points in the Province deficiencies averaged about seventy-five per cent.

Temperatures were below normal also in the western part of the District of Mackenzie. Deficiencies were eight or nine degrees along the valley of the Mackenzie River, nine degrees at Port Radium and six degrees at Yellowknife. Eastward, however, excesses were the general rule, two degrees at Fort Reliance and four degrees at Cambridge Bay. Excesses increased eastward averaging eight degrees in the District of Keewatin and varying across the District of Franklin from two degrees in the western part to eleven degrees at Resolute and down again to four degrees at Clyde. The greatest excesses were in the southeastern part of the District of Franklin with Southampton Island and Frobisher Bay reporting temperatures sixteen degrees above the usual January values.

With a few exceptions, precipitation was above normal throughout the Northwest Territories in January. There was an area of forty or fifty per cent deficiency around Great Slave Lake, an area of twenty per cent deficiency at Coppermine, and Isachsen reported no precipitation at all. Elsewhere, surpluses were general, about forty to one hundred per cent in the District of Keewatin and one hundred and twenty-five per cent at Frobisher Bay and Clyde. Nottingham Island reported the largest surplus with more than twice the normal precipitation.

JANUARY 1959

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
